Technical Skills

HTML/CSS

SASS/SCSS

JavaScript

WordPress

PHP/MySQL

React

NextJS

Responsive Design

BulmaCSS

TailwindCSS

Bootstrap

React Native

Supabase

Git

Linux

- Utilizing project management software and tools

2. **IT service management:**

- Developing and implementing IT service policies and procedures
- Monitoring service levels and ensuring quality customer service
- Maintaining service level agreements with internal and external stakeholders
- Managing service requests and incidents
- Conducting service reviews and identifying areas for improvement
- Implementing ITIL best practices

Languages

English (*proficient*)

3. **IT strategy:**

- Developing IT strategic plans aligned with business objectives
- Identifying new technologies and solutions to support business growth
- Assessing the current IT landscape and identifying gaps and opportunities
- Developing business cases and proposals for new IT investments
- Developing and monitoring IT budgets

4. **Wordpress:**

- Developing and maintaining Wordpress sites
- Installing and configuring Wordpress themes and plugins

- Developing custom Wordpress plugins and themes
- Ensuring Wordpress site security and performance
- Managing Wordpress site updates and backups

5. Databases:

- Designing and maintaining databases
- Managing database security and access control
- Conducting database backups and recovery
- Developing SQL queries and stored procedures
- Optimizing database performance

6. People management:

- Hiring, training, and supervising IT staff
- Conducting performance evaluations and providing feedback
- Developing employee training and development plans
- Managing employee schedules and workload
- Encouraging a positive team culture

7. Customer relationship management (CRM):

- Developing and maintaining CRM systems
- Conducting customer needs assessments

- Developing and implementing customer engagement strategies
- Managing customer data and analytics
- Developing customer service standards

8. IT infrastructure management:

- Managing IT infrastructure operations and maintenance
- Ensuring high availability and reliability of IT services
- Conducting capacity planning and performance monitoring
- Ensuring IT security and compliance
- Coordinating disaster recovery and business continuity planning

9. Software development:

- Developing and maintaining software applications
- Conducting software testing and debugging
- Ensuring software security and performance
- Managing software updates and version control

10. Information technology:

- Developing and implementing IT policies and procedures
- Ensuring IT compliance with industry standards and regulations
- Developing and managing IT budgets

- Conducting IT audits and assessments
- Developing and implementing IT training programs

11. Front-end development:

- Developing and maintaining user interfaces for software applications and websites
- Conducting usability testing and user research
- Developing responsive and accessible design
- Managing front-end development projects and timelines
- Staying current with front-end development trends and technologies.

Web Developer

Freelance

Mar 2007 – Dec 2011 (4 yrs 10 mos)

Tasks:

1. Developing websites using WordPress and PHP:

I created websites using WordPress CMS and PHP programming language. You should also have experience in designing custom WordPress themes and plugins.

2. Optimizing websites for search engines:

I optimized websites for search engines like Google by performing keyword research, on-page optimization, off-page

optimization, and technical SEO. This includes optimizing website content, meta tags, URLs, internal linking, and other factors that impact SEO.

3. Designing graphics and visuals:

I used Adobe Creative Suite to design graphics, visuals, and other media content that can be used on websites. This may include designing logos, banners, images, and other multimedia content.

4. Managing databases:

I managed Oracle databases and MySQL databases by designing database schema, creating and optimizing SQL queries, and managing database backups and restores.

5. Developing custom web applications:

I developed custom web applications using PHP and MySQL. This includes developing web applications that can interact with databases, perform server-side validation, and handle user authentication and authorization.

6. Debugging and testing websites:

I debugged and tested websites to ensure that they are free of bugs, errors, and security vulnerabilities. This includes using tools like Google Analytics, Google Search Console, and other tools to monitor website performance and identify potential issues.

Network Engineer

Freelance

Mar 2007 – Dec 2011 (4 yrs 10 mos)

Tasks:

1. Designing and implementing LAN and WAN networks:

I designed and implemented LAN and WAN networks, including network topologies, network security, routing protocols, and other related technologies. This includes configuring switches, routers, and other network devices to ensure proper connectivity and security.

2. Managing and troubleshooting network infrastructure:

I managed and troubleshooted network infrastructures, including LAN and WAN devices, firewalls, VPNs, and other network-related equipment. This includes monitoring network performance and taking proactive steps to ensure high availability and performance.

3. Managing DNS and other internet/intranet technologies:

I managed and maintained DNS servers, proxy servers, web servers, and other internet/intranet technologies. This includes configuring and maintaining web applications, such as Apache, Nginx, IIS, and other web servers, and ensuring they are highly available and secure.

4. Configuring and maintaining Cisco networking equipment:

I configured and maintained Cisco networking equipment, including routers, switches, and firewalls. This includes configuring VLANs, routing protocols, and

other advanced features to ensure proper network connectivity and security.

5. Analyzing network traffic and security incidents:

I analyzed network traffic and security incidents, including network breaches, cyber attacks, and other security incidents. This includes using various network security tools, such as intrusion detection and prevention systems (IDPS), firewalls, and other security-related equipment.

Web Developer

SoftQuest Systems · Internship

May 2005 – Dec 2006 (1 yr 8 mos)

Tasks:

1. Developing websites using WordPress and PHP:

I developed websites using WordPress CMS and PHP programming language. This includes designing custom WordPress themes and plugins, and implementing various WordPress features.

2. Designing and developing web pages using Macromedia Dreamweaver:

I designed and developed web pages using Dreamweaver and other Macromedia softwares. This includes creating HTML and CSS pages, and implementing various multimedia content using tools like Adobe Photoshop and Illustrator.

3. Working with ColdFusion:

I learnt to work with ColdFusion, which is a server-side scripting language used to develop web applications. This includes creating custom ColdFusion pages and implementing various features, such as database connectivity, form handling, and other related tasks.

4. Developing and managing MySQL databases:

I developed and managed MySQL databases, including creating database schema, writing and optimizing SQL queries, and performing database backups and restores.

5. Assisting with website maintenance and updates:

I assisted with website maintenance and updates, including making changes to existing web pages, adding new content, and ensuring the website is up-to-date and running smoothly.

Education

NIIT

(MMS) BSc in Computer Science
(Software/Network Engineering)

2001 – 2004

Licenses & certifications

Product Design - GeneSys Tech Hub UpSkill'23

Ongoing 2023

Front End Development Libraries - freeCodeCamp

Ongoing 2023

Udacity Nanodegree Program - Front- end Development

Issued Dec 2022
